DTI-TK Quick Look Plugin for Mac OSX

About DTI-TK Quick Look Plugin

This plugin uses the Mac OS X Leopard's built-in innovative Quick Look framework to enable a quick assessment of any 3-dimensional image volume in the supported medical image formats (NIfTI / Analyze / FreeSurfer) directly from the Finder. Using the Finder's Cover Flow mode, a large collection of medical images can be browsed through and quickly inspected just as easy as flipping through your photos. Furthermore, a large number of images can be compared side-by-side by selecting them together in the Finder, then pressing the space bar to bring up the Quick Look preview mode.

System Requirements

Mac OS X 10.5 or later

A preview of ITK-SNAP 2.0

Overview of ITK-SNAP

Overview of ITK-SNAP

- ITK-SNAP is a software application used to segment structures in 3D medical images. It provides semi-automatic segmentation using active contour methods, as well as manual delineation and image navigation.
